THE MAGNES PRESS, THE HEBREW UNIVERSITY

A primary distinction in the basic structure of the most common sentence-types is that between the two parts that have mostly been called 'logical' subject and predicate, and are nowadays also commonly known as 'theme' and 'rheme' or as 'topic' and 'comment'. This distinction is involved (as one scholar put it some twenty years ago) in any "interpretation in depth" intended to reveal the 'real' structure of the sentence "hidden under the surface of formulation" so as to bring to light the "ultimate meaning" of the utterance, which is different from what he calls "the traditional surface-meaning".

The 'logical' subject and predicate are more easily recognizable in the structure of the nominal (or copular) sentence, which leaves no key position to be occupied by a finite verb, whose inherent coalescence of lexical substance and grammatical accidence may require some effort in order to break through the "surface of formulation".

An important aspect of the dynamic of syntax is its power (a) to turn any extracted part of the sentence into a "logical subject" (the so-called "topicalization"),⁴ and (b) to mark any part of the sentence as "logical predicate". The latter process (which might be called "commentization" or the like), when carried out formally, results mostly in some variety of the construction generally known as "cleft sentence",⁵ in which [128] the "logical predicate" is formed into a predicate (غَبُرُ) of a nominal (or copular) sentence (for which the French term "vedette" has also been suggested), and the rest of the utterance ("glose") is nominalized so as to become a subject-clause (أعُبُتُدُ) of that nominal (or copular) sentence.

The subject-clause may be extraposed, and represented pronominally in the body of the sentence, like in English It is $he \mid that \mid who has done it$; French $C'est lui \mid qui \mid a fait$, (Qui fut étonné..., ce fut le pasteur); Aramaic "it is the rabbis that are mistaken", but the extraposition of the "glose" (which involves the use of the cataphoric it, ce and the like) is not an essential part of the complex called cleft sentence. Cf., e.g., Italian E lui che E' ha fatto; Arabic E' inna- E' man that you have killed" (cf. IOS I. 78–79). Which order is "favourite" or required in any given language, vedette—glose or glose—vedette, is again not an essential feature of the construction in question. What really counts here is the forming of the "logical subject" into a substantival clause which is made the E' mubtada of a nominal or copular sentence, so that the "logical predicate" will form its E' and E' is E' into E

There exist, however, cases that raise difficulties. Such are those cleft sentences where a pronoun as subject and the logical predicate form a nuclear nominal sentence, but the rest of the utterance is not marked formally as nominalized, like אני הלכחי וה אני שהלכחי (both existing in colloquial Hebrew). The construction האני שהלכחי is that of the common cleft sentence, in which אני is I'' forming a favourite sentence-type in which אני is the predicate, שהלכחי being a substantivized concrete relative in apposition with האני הלכחי it is not clear where the אני belongs, unless we recognize the construction as an imperfectly-transformed cleft sentence, in which the verb just fails to be marked as included form.

Within the realm of Aramaic we find extremely common in Babylonian Talmudic rounded-off cleft sentences with אוא דאם ווא ווא דאם "it is I that brought out"; אנא הוא דאמר הכי "it is for shame that he has said so"; משום כסיפותא הוא "what is it that you would say". The presence of יד in such sentences is practically general in this language, [129] but that is not the case in Mandaic, where the same construction is used mostly in the interrogative, with or without the "מאהו דבאיית "quid est, quod quaeris?", מאהו דבאית "what is it that you have seen?" besides מאהו הוית "what is it [that] you have done?", מאהו הוית "what is it you have seen". "

¹ In practically the same meaning subject and predicate have otherwise been defined as "psychological" (H. Paul, G. von der Gabelentz), "real", "natural", or "cognitional" (v. M. Sandmann and others). There are also other terms proposed for the same dichotomy, like "exposition"— "predicate" (Wegener), "Ausgang"—"Ziel" (Blümel) etc. Cf. IOS I (1971), p. 37, n. 3. Arabists are familiar with the "natürliches Subject/Prädikat" used by Reckendorf, in presenting extraposition, though this author failed to recognize the equivalence of his "natural subject" to the "so-called psychological subject" (v. H. Reckendorf, *Die syntaktischen Verhältnisse des Arabischen*, p. 782 n.).

² "Theme"—"rheme", besides others, are terms of the Prague school; "topic"—"comment" were introduced by Hockett, cf. *IOS* I (1971), p. 37, n. 3.

³ See M. Sandmann, Subject and Predicate (Edinburgh 1954), pp. 235–237.

⁴ Cf. IOS I (1971), pp. 37 & seqq.

⁵ This term in its English form was introduced (from Danish) by Jespersen, later revived by Polotsky, and has become common in modern linguistic parlance; cf. *IOS* I (1971), p. 50, n. 29 & n. 30.

⁶ The congruence (in person) of אני with אני falls within a wider rule of attraction which is valid in Hebrew and has numeral parallels elsewhere. [Such attraction, however, does not necessarily occur; cf., e.g., אני הוא שהכין אותך לבחינות בגרמנית ובלטינית (Amos Oz, אני הוא שהכין אותך לבחינות בגרמנית ובלטינית (Tel Aviv 1987), pp. 180₂₋₃.]

⁷ Cf. M. Schlesinger, Satzlehre der aramäischen Sprache des Babylonischen Talmuds (1928) p. 222, n. 1.

⁸ Cf. Nöldeke, Mandäische Grammatik, pp. 435-438 (§ 289); Drower & Macuch, A Mandaic Dictionary, pp. 237-238.

[130] Interrogative pro-words, which are by definition logical predicates, are specially apt to enter the position of the "vedette" of a cleft sentence. The common French interrogative periphrasis with X + est-ce qui/que... is a case in point. This occurs in Hebrew as well, but with the verb-form left bare and not marked as nominalized: Isa. ב אַ יַרְשִּׁיעָנִי (Syr. בְּעַבָּי מִירָ מָרָא יִרְשָּׁיעָנִי (who is it (that) will condemn me?", cf. I Sam. xxvi 14 מִי אַמָּה קְרָא אָר קּרָא אָר קּרָא אָר קּרָא (Syr. אֶל-הַפֶּלֶרְ (Syr. אֶל-הַפֶּלֶרְ (Syr. אֶל-הַפֶּלֶרְ (Syr. אָל-הַפֶּלֶרְ (Syr. אָל-הַפֶּלֶרְ (Syr. אָל-הַפֶּלֶרְ (Syr. אַל-בּרַבּא) "who art thou (that) criest to the

Of great interest are in this connexion the endeavours of the Arab grammarians to analyse properly the parallel Arabic interrogative constructions with مَاذَا or الله The problem was whether أَن is to be regarded as relative (بَعْنَى الذي) or مَاذا be considered one word. Those holding the Kufic view, namely that any demonstrative may freely be employed as relative, would naturally analyse مَاذَا صَنَعْتُ؟ as being equivalent to ; مَا الّذي صَنَعْتُ؟ al-Farrā³, [131] Ma^cānī al-Qur³ān I (Cairo 1955), pp. 138–139; al-Anbarī, $Kit\bar{a}b\ al^{-3}Ins\bar{a}f$ (Leiden 1919), pp. 302–304 = ed. Muḥammad Muḥyiddīn ^cAbd al-Ḥamīd (Cairo 1945) II, pp. 424-428. For the others, who rejected that opinion, it was not as easy. Sībawayhi's chapter concerning this problem (ed. Derenbourg §231, vol. I pp. 358–359 = Būlāq I 404 &c. = Cairo 1968 II 416-419) does not conceal his uneasiness: Because of instances of the type that are answered by a noun in the nominative, e.g. فَيْرُ , he feels ماذا forced to agree that exceptionally in such cases, in questions opening in and مَنْ ذا the is is relative. But in other cases, where the answer is in the accusative (مَاذَا رَأَيْتَ؟ - خَيْرًا), is to be taken for a compound interrogative ism. And yet, other usages, as Sībawayhi did not fail to discover, may invalidate all such reasoning, because answers, even those consisting of a single noun, need not be directly related to the syntactical structure of the question. If مَنْ رَأَيْتَ؟ – صَالِحُ is allowed (on the $taqd\bar{\imath}r$ مَنْ رَأَيْتَ؟ – صَالِحُ and – مَنْ رَأَيْتَ وَمُنْ رَأَيْتَ وَمُنْ رَأَيْتُ زَيْدُ is allowed (on the $taqd\bar{\imath}r$ (مَنْ رَأَيْتُ زَيْدُ an be tolerated (on the $taqd\bar{\imath}r$ (مَنْ رَأَيْتُ زَيْدُ is permitted (on the taqdīr (رَأَيْتُ زَيْدًا), then, of course, a nominative in the answer

⁹ The special conditional construction with -n d- (-n amage) "if it is that...?" (Nöldeke, Syr. Gramm. § 374 B; Duval, Traité de gramm. syr. § 414), if it belongs here at all, is the only exception.

The formula predicate + pronominal subject involves a further rule, according to which the enclitic pronominal subject will follow immediately the first word of the predicate, before any other part or that predicate, as in a construct "he is a brother of her father". Nouns in construct-state relation are considered here, as elsewhere, as one syntactical word; of a construct the is Rebekah's son".

¹¹ See specially M. M. Bravmann, Studies in Arabic and General Syntax, pp. 52–55 (§§ 44–46). The same construction has also been discussed in my "Tautological Infinitive", IOSI (1971), spec. on pp. 50–57. For the special construction with the cognate infinitive in the "vedette" cf. also Bravmann, "The Infinitive in the function of 'Psychological Predicate' in Syriac", Le Muséon LXXXIV (1971), pp. 219–223.

¹² Cf. P. Boyer & N. Spéranski, *Manuel pour l'étude de la langue russe*, p. 117, n. 5; *IOS* I, p. 54, n. 37. This construction in Russian is not freely used where the verb stands for an "abstract relative" (content-clause); for such use in the interrogative see below.

¹³ E.g. The book I am reading / I have a brother is condemned to die (Sh.) / There is a man wants to speak to you / He says he is ill / I must request you will write immediately. On the presence and absence of that see now D. Bolinger, That's That (The Hague 1972).

¹⁴ H. Ewald, Ausführliches lehrbuch der Hebräischen sprache⁸ pp. 805, 817.

¹⁵ Non-genitive instances are exceptional (Isa. xli 24) if not opening with אל (like Isa. lxiii 19; Prov. xiii 1 & xiii 8); cf. Ewald, *ibid.*, p. 820.

¹⁶ With omission of the غائد, which rightly deserved to be mentioned; see Ibn Ya^cīš, Šarḥ al-Mufaṣṣal §176, ed. G. Jahn I, p. 465 = Cairo edition III, p. 149; cf. al-Suyūṭī, Šarḥ šawāhid al-Muġnī (Cairo A.H. 1322), p. 55.

¹⁷ Cf. Ibn al-Šağarī's note on the possible and impossible *taqdīrs* for such sentences: Al-Sağariyyah (Hyderabad A.H. 1343), pp. 171–172.

to a question with is no reliable guide for determining the function of is as relative. Thus far Sībawayhi. Later authors accept mostly the case-form of the noun in the answer as criterion. Their whole treatment of the problem is unsatisfactory, because they keep ascribing a relative function to is while it can easily be proved that it &c. is incapable of being relative. H. L. Fleischer (Beiträge zur arabischen Sprachkunde V, 1874, pp. 143-145 = Kleinere Schriften I, Leipzig 1885, pp. 355-356) has already shown (a) that in questions with عائد &c. a عائد which would be expected to refer to the is if it were relative, is normally impossible, 18 so that for is to be the head of a normal concrete relative clause is actually out of the question. He has also pointed out (b) that الماذ ك د. admit of no interpretation of is as being is here expected). To حَرُف مَصْدَريّ, is here expected). To Fleischer's two arguments I am taking the liberty of adding two others: shows clearly that there is no way to regard ملة as a منتفت as a منتفت of si; (2) There in which مَنْ ذَا الذي is present and the أمَنْ ذَا الذي is present and the أمَنْ ذَا الذي there, certainly not as a relative pronoun (while * ماذا هذا does not seem to exist).

All Arab grammarians who discussed the problem had a strong feeling that the verb in the type אונן סיינים שנו must often be recognized as somehow "relativized", which is true. Their mistake was that they clung to the false assumption that it is the is that marks this status, and ascribed to the is the function of governing the relative verb, while in fact the relation between the two is apposition, and is is demonstrative, the construction of שנו שנו being no other than the imperfectly-transformed cleft sentence. It corresponds to the Hebrew אונן שנו אונן אונן שנו אונן מון אונן שנו אונן שנ

For turning any part of the sentence into a logical predicate, a formal transformation is not always called for. In fact, intonation (or "meaningful stress") alone may prove as powerful as "sentence cleaving" (Ph. Wegener, H. Paul, G. von der Gabelentz, Gardiner, Bally). Halfway between intonational (or stress-pattern) modulation and full formal transformation into a cleft

sentence, there is available the construction of the imperfectly-transformed cleft sentence. In some languages, especially in Syriac, this process is fully operative, in some others it is restricted. In each case it involves the basic topic-comment relation. The imperfectly-transformed cleft sentence is a genuine syntactical construction, which invites typological comparison, and should not be described as a survival of some linguistic accident. The absence of a relative marker with the verb does not really affect its syntactically nominal status.

¹⁸ The resumptive pronoun is here not just "dropped" مَحْلُون (see references in footnote 16), but rather out of place. An exceptional example of mā dā with a عَالَد (مَا ذَا جِنْتَ نِيه) has been quoted by Reckendorf, Die syntaktischen Verhältnisse des Arabischen, p. 599.

CONGRUENCE AND COMITATIVE AND A PROBLEM OF LINGUISTIC TYPOLOGY

1. Where in connexion with one verb there are two actors participating in the action, the congruence rules of the verb are often problematic, especially if forms in first or second person are involved. Very common in many languages all over the world are constructions of the type "we went with you" etc. (1) referring to two actors only, thus meaning approximately "I went with you" or "we went, namely I and/with you". Similar illogicality is also apparent when two different persons are referred to as conjoined in phrase-types like "we with you" (Russian $my \ s \ toboj$) = "I + you" etc. [or "we ... with our father" = "I + my father", see below, foot-note 7].

Commentating upon such constructions, discussing their origin and adducing evidence of their world-wide distribution, had been much in vogue for over four decades (until the 1930's)⁽²⁾.

2. In connecting (a) Pronoun + X, besides the last-mentioned type (i) "we with X"⁽³⁾, there are two other types, namely (ii) "we and X" and (iii) "we X"⁽⁴⁾. [The first pronoun is dual or plural 1st or 2nd or 3rd person; the X position is sometimes open to pronouns as well as to nouns, sometimes to pronouns only or nouns only.] The parallel phenomenon of such "illogical" constructions with a verb is recorded with the other person introduced by (i) "with" or by (ii) "and"⁽⁵⁾; it does not seem to occur with the other person immediately

(1) Dual forms, if available, will be found in such constructions.

(3) "With" can also be expressed through a comitative-instrumental case.

(4) (i) Russian my s toboj; (ii) Duala biso na wa; Ewe mí kple wò; (iii) French nous deux lean; Yaunde bí oa ; first recorded in Old English and Old Norse.

(5) (i) Russ. my posli s nim vmeste; Germ. Wir gingen mit meiner Frau spazieren; French nous chantions avec lui; Ital. appena furono soli colla ragazza; Turk. sizinle başbaşa konuş-
