

PARIS-
AMSTERDAM
LOGIC MEETINGS
OF YOUNG
RESEARCHERS

PALMYR 3 (Paris, France) CALL FOR ABSTRACT

What is the relationship between logic and reasoning?

For a long time, logic and reasoning have been bedfellows, for better or for worst. Boole viewed logic as nothing less than *An investigation into the Laws of Thought*, while Frege argued for an irrevocable split up. But even if modern logical literature abound with attempts at getting closer to real-life reasoning (e.g. epistemic, fuzzy, conditional, intensional, paraconsistent, and other "non-classical" logics) the state of their relationship is still unclear. Does logic *describe* reasoning? Does it provide *normative standards* for reasoning? For this third PALMYR, we are looking for researchers from, but not only, Paris or Amsterdam interested to share their opinion on this long-standing relationship.

Each PALMYR consists of two workshops, one in Paris and one in Amsterdam, and is aimed at fostering connections between two lively logic communities. This year's first meeting will be in Paris on June 27th and 28th. As in the previous editions, each talk will be commented.

Interested researchers should submit electronically a one-page (12pt) abstract before April 10th. The submission form is available on the PALMYR-3 website:

<http://www.ilc.uva.nl/PALMYR/PALMYR-3/>

Notification of acceptance will be sent by April 30th.

Organization:

Isidora Stojanovic (CNRS, Institut Jean-Nicod)

Olivier Roy (ILLC, Amsterdam)

Important dates:

Submission deadline: April 10th

Notification of Acceptance: April 30th

PALMYR-3: June 27th-28th
